generate a c++ program that prints "Hello World!". File name should be main.cpp

C++ program to print "Hello World!" ▾

🔒 Share

<> main.cpp

```cpp
#include <iostream>

int main() {
    std::cout << "Hello World!" << std::endl;
    return 0;
}
```

How to compile and run locally:

- Compile: g++ main.cpp -o main
- Run: ./main

I can't directly add files to your GitHub repository from here. To add this file to your repo, create main.cpp with the contents above, then run:

- git add main.cpp
- git commit -m "Add main ↓ printing Hello World"
- git push

<> main.cpp ✕

6 lines · 95 bytes

```cpp
1  #include <iostream>
2
3  int main() {
4      std::cout << "Hello World!" << std::endl;
5      return 0;
6  }
```

<> **main.cpp** ✕

6 lines · 95 bytes

```cpp
1  #include <iostream>
2
3  int main() {
4      std::cout << "Hello World!" << std::endl;
5      return 0;
6  }
```
